SUBJECT: Upgrade Progress Update 03-25-2014

In the next few weeks we will be giving brief descriptions of each area and some of the new features of 9.1.

Inventory:

This week we promoted approximately half of the applications to our testing environment. As we continue to test, we are identifying new functionality in the 9.1 environment. The overall screens for inventory and inventory process are very similar to the current 9.0 functionality. In addition we have identified a fix related to soft commits that we will continue to test. This enhancement resolves an outstanding location fix for our warehouses.

In testing, we have learned that we have similar grid functionality as we do in an excel application. We are able to freeze columns, hide and unhide columns, drag and drop columns, as well as copy and paste. Right clicking in the grid will allow you to move to the Row and Form exits without moving your mouse to the top of the application. The menu location has changed. In 9.0 menus were to the left of the screen. 9.1 places the menus at the top and the system calls it "Navigation" with drop down capabilities. This is a new look and feel.

It is anticipated that we will be contacting our testers within the next few weeks to identify individuals that will be working with State Accounting to complete the user's acceptance testing.
