Award Explanation:

As specified in B.1. on page 3 of the Specifications and Special Terms and Conditions of 3577 OF, the ballistic helmet suspension system "Must be of padded webbing or removable padded system for impact protection and providing maximum air circulation." The ballistic helmet bid and sample provided by the apparent first lowest bidder, Protective Products Enterprises, Inc., does have a removable padded system. However, officer safety, workmanship, and dependability of the product were all criteria/considerations in the evaluation and testing of ballistic helmets as specified under letter F. "Samples for Evaluation and Testing" on page 4 of the Specifications and Special Terms and Conditions of 3577 OF. The ballistic helmet provided by Protective Products Enterprises, Inc., uses the same removable padded system to accomplish both the suspension system and impact protection and when tested by the Nebraska State Patrol, provides little if any impact protection, which is a crucial officer safety issue as the adjustment for the standoff distance between the top of the head and the helmet is obtained by adjusting the padded sling, using Velcro. Since this helmet only uses hook and loop Velcro to accomplish this and the underside of the pad is of a soft material, which then snags the hooks, the very slightest impact causes it to loosen and/or come completely detached, which is also an officer safety issue. In addition, there is an issue/concern with air circulation. The side padding of the PPE Inc. helmet is attached directly on the helmet lessening the air circulation as well as lessening the impact resistance due to the material thinness. Finally, the chin strap/harness is also starting to fray and come apart, that poses a workmanship concern. Due to the reasons stated above, the Nebraska State Patrol recommends awarding the ballistic helmets to the apparent second lowest bid from Express Police Supply for the Delta 4 BLT (boltless) Ballistic Helmet at the price of \$219.99.
