* The low bid submitted by Tones, Inc. for a Kasco Model Drill doesn't meet a number of specifications. The Kasco doesn't have a double disc furrow opener . It only has a single opener. The double disc furrow opener is needed to ensure proper seed placement in the soil especially in heavy residue situations. The Kasco model doesn't meet specifications in the seed boxes. This model has smaller boxes plus it doesn't offer the three separate boxes for different types of seed. The specifications call for one box each for legumes, native grass seed & cool season grass seed. The Kasco only offers two boxes one for legumes & one for both native & cool season grass seed. The three boxes are necessary because each boxes is designed to handle different types of seed. There is a lot of difference between native grass seed & cool season grass seed in it's physical characteristics. The Kasco model only offers one hydraulic cylinder while the specifications call for two.
