Questions and Answers

Following are the questions submitted and answers provided for the above mentioned Request for Proposal. The questions and answers are to be considered as part of the Request for Proposal. It is the Bidder's responsibility to check the State Purchasing Bureau website for all addenda or amendments.

Question Number	RFP Section Reference	RFP Page Number	Question	State Response
1.	Addendum One Q&A	#4, 28 & 69	I'm requesting some clarification. I have a concern regarding one of the questions and the answer thereto, in particular #69. It appears that the question does not take into regard any of the qualifying parameters of the print resolution as the question simply asks if the state will allow a thermal transfer print system to match all digitally printed plates at the requested hourly output. The state's answer was simply yes, without any qualification of the resolution requested. Is the state allowing bidder's to respond with a proposed thermal transfer print system that accomplishes this basic qualification of simply matching the current digitally printed graphics at 4000 plates per hour?	The State was clarifying thermal transfer or ink jet are acceptable technologies. Regardless of the of the plate design, print technology or required number of printers to be supplied, the solution shall be able to print, 4000 - 12" x 6" plates per hour at 800 x 400 dpi resolution . CSI understands setting the printer(s) to other resolutions may produce more or less plates per hour.

			Will the state allow potential bidders to ask another round of questions based on the answers given to the first round?
